

**City of Port Colborne
Special Meeting of Council Addendum**

Date: Tuesday, August 11, 2026
Time: 6:30 pm
Location: Council Chambers, 3rd Floor, City Hall
66 Charlotte Street, Port Colborne

Pages

4. Closed Session (Beginning at 5 p.m.)

4.1 Council Training and Education

- *a. Confidential Education Presentation regarding Municipal Responsibilities for Community and Social Services**

Confidential Education Presentation regarding Municipal Responsibilities for Community and Social Services pursuant to the *Municipal Act, 2001*, subsection 239(3.1) A meeting of a council or local board or of a committee of either of them may be closed to the public if the following conditions are both satisfied: 1. The meeting is held for the purpose of educating or training the members. 2. At the meeting, no member discusses or otherwise deals with any matter in a way that materially advances the business or decision-making of the council, local board or committee.

10. Delegations

- *10.1 Betty Konc** **1**

Delegating on items 14.1 and 14.2

- *10.2 Gary Gaverluck** **3**

Delegating on items 14.1 and 14.2

14. Items Requiring Separate Discussion

Appendix A has been replaced.

PORT COLBORNE HEALTH COALITION

Our response to the Action Plan

The mandate of our coalition is and always has been to advocate/fight for 24/7 access to health care in our community. The terminology of whether that health care is called an Urgent Care Centre or Expanded Primary Care Unit does not matter. The point is that this community needs access to 24/7 care, which is nonexistent currently, unlike our northern tier neighbours who enjoy that access 365 days a year.

The Action Plan, developed by the city is a step in the right direction to get the community the healthcare, that in some cases we don't have access to unless we leave the community and travel, sometimes to care much further away and outside of the region.

Transportation is large issue in the city not to mention getting outside of the city to access healthcare by some of our most vulnerable citizens. We know that the city is aware that this will become a situation that needs to be solved should our councillors vote to go ahead with the Action Plan. Being able to access 24/7 care here in the community can help those that would normally simply not even attempt to have their health issue seen to because they have no way to leave the municipality, or they are not rostered with a doctor in the city.

Having attended all of the Health Care Advisory meetings, as co-chair of the Port Colborne Health Coalition, I do understand that the city has made many inroads in creating contacts with those that provide allied services, which we only have on a limited basis. We recognize that the city had done vast amounts of research to get to the point of presenting this Action Plan to the community, with the hope that we the citizens will embrace the idea of a direction that will put us healthcare wise on a more level playing field with other municipalities, and get us more than we currently have, which is basically no healthcare after 8 pm.

Niagara Health is basically throwing us to the wolves when they decide to close the doors of the UCC unit at its current location. When that happens not only will access to after hours care disappear, but the diagnostics that go with the UCC unit will go too. Our local doctors depend on the diagnostics to help treat their patients, who will be forced to leave the community to access diagnostics elsewhere, delaying treatment. Having access to

24/7 care isn't just about going to the UCC unit when we have health issue, it is also about those diagnostics that go with getting the help that we need in perhaps some of our darkest hours.

There have been lots of comments from citizens about this plan, not all of them accurate and certainly biased towards putting a Healthcare Hub new build anywhere but at the current hospital site. This is definitely a conversation for another time. Wherever this Healthcare Hub goes the Port Colborne Health Coalition will continue to advocate for 24/7 access to care. We do understand the province is no longer funding this type of care however with partnerships and other funding this type of care can be had. The St Thomas model seems to be one that is working with the addition of medical residents that can take on after hours care should it be needed by a patient.

All of this to say that our group, and hopefully the city will continue to advocate for 24/7 access to care for its residents. WE are not alone in this provincially, especially those of us who are deemed to be rural communities, Do we deserve the same level of care as our urban neighbours? Yes of course we do, there just needs to be the political will to get us there.

Respectfully,

A handwritten signature in black ink, appearing to be 'Betty Konc', with a long horizontal line extending to the right.

Betty Konc

August 11, 2026

Gaverluk Delegation: City of Port Colborne Council meeting

Subject: Community Health and Wellness Action Plan – Public Engagement Results

Agenda Item: 14.1 / 14.2

Mayor Steele, Council Members, Staff and Fellow Residents
Fourteen hours. That's a full workday, in pain, before a doctor sees you. According to Canadian Institute for Health Information, last year, 1.5 million Canadians 1 in 10 ER patients waited more than 14 hours in the emergency room. That's up 28% since 2018. This is what a system stretched past its limit looks like now. Everyone here is aware of or have personally experienced extended wait times at the three Niagara Hospital Emergency Rooms. ER wait times significantly increased when, in 2022 Niagara Health reduced Port Colborne and Fort Erie's UCC operating hours from 24/7 to 10 am to 8 pm. Niagara Health's staffing issues have also created intermittent closures. There are better ways to provide access to healthcare and after hours care.

When Niagara Health closes the Port Colborne site in 2028, we can expect those wait times to dramatically increase as the residents of Port Colborne and Fort Erie will have no other option but to travel, by any means that they can, to one of the other three Niagara Health Sites for treatment unless we have our own treatment options here in Port Colborne. For many in our community, who do not have access to their own transportation, this will add to the difficulties that they already endure accessing their healthcare needs.

P2

I hope to give you some insight into our own current healthcare based on my firsthand patient experiences having recently being admitted to the St. Catharines, Niagara Falls and Welland hospitals. I also attended the Port Colborne site for physio therapy.

May 1st, I went to the St. Catharines site for a complete right knee replacement. The surgery itself was successful and normally this surgery requires a two night stay. However, I suffered a reaction to the epidural which extended my stay to six days before being discharged.

Two days later, I returned to the St. Catharines emergency department because of a kidney stone attack. I was forced to sit upright in a wheel chair, in the waiting room for over thirteen hours, in severe pain from both the stone and my recent knee surgery before being seen by a doctor, despite my wife Barbara's repeated attempts to have me seen sooner. There is a sign in the waiting room stating that if your pain becomes unmanageable, to inform the receptionist. The size of this stone was too large to pass so an emergency procedure was done to limit the movement of the stone until it could be broken up by laser ten days later. Because of hospital operation room scheduling, this procedure would be done at the Niagara Falls site. Because of the threat of infection, my hospital stay this time was five days before being discharged.

As luck would have it, the very next day after being discharged from the St. Catharines site, I suffered an uncontrollable nose bleed as result of being on blood thinners. This time we went to the Welland ER. I was immediately put in a bed in the ER. My time in ER was approximately four hours before a type of nasal packing was used to stop the bleeding. I was told to return in two days if the bleeding completely stopped to have the packing removed. I returned in two days and had to experience a wait time of nine hours before it was removed. The removal process took less than a minute.

I must say, that despite what I went through, my patient experience with all staff and doctors was excellent. However, it is very evident that their stress levels and their resources are stretched to the limit.

P3

Having spent all of this time in our area hospitals, I engaged with staff about the state of the healthcare system in general and about our UCC closure. As to the state of our healthcare system, their comments were that the system is broken and underfunded by our provincial government. There appears to be a deliberate denial by the Ford government to understand or to look at the specific needs here in Niagara. The government has no idea as to how geography and weather events play into our ability to access healthcare. Many are frustrated because of the governments mindset of whatever is good for the GTA should be good everywhere else where in Ontario.

As for our UCC closure. There is an undeniable understanding of how the closure will impact our community and how it will increase the demands on the three remaining hospital sites.

We all have an idea of what we need or want. I would love to still have a fully functional hospital. But, I learned a long time ago that you cannot always have what you want. You can sit back, be complacent and let what we have disappear in 2028. Or you can try to keep what we have and improve upon it. It is for this reason I support the efforts of Citizens Advisory Committee and City staff for the creation of the Community Health and Wellness Action Plan.

Why should we support this Action Plan? Because no one else has come to the table with an alternative business plan that is as concise and robust as the action plan is. A plan that will continue to develop as needed.

Pending councils approval, we are looking forward to receiving exceptional care in our new Health Hub that will have diagnostics and lab services available. The superior care we will have access to, will be better than what we now receive at our UCC.

Without this action plan - - - we would have nothing in 2028

Thank you.

Subject: Community Health Hubs-Planning for a Sustainable Healthcare Future in Port Colborne

To: Council

From: Office of the Chief Administrative Officer

Report Number: 2026-116

Meeting Date: August 11, 2026

Recommendation:

That the Office of the Chief Administrative Officer Report 2026-116 be received; and

That Council direct staff to develop a comprehensive business case for a Port Colborne Community Health Hub, including community governance options, financial analysis, partnership opportunities, site considerations, and capital funding opportunities; and

That Council direct staff to seek partnerships and funding opportunities to support a Community Health Hub.

That staff report back to Council following the 2026 Municipal Election with the completed business case and recommendations for Council's consideration.

Purpose:

This report introduces the concept of a municipally supported Community Health Hub as a potential long-term solution to improving healthcare access in Port Colborne, as supported by the Health and Wellness Action Plan. This report seeks Council direction to undertake the business planning and partnership discussions necessary to develop a business case for future Council consideration.

Background:

Port Colborne is a growing waterfront community of approximately 23,000 residents with a strong sense of local identity, community connection, and pride. The city offers a high quality of life and continues to attract new residents and investment; however, it also faces several structural pressures that shape current and future health service needs.

Compared with the provincial average, Port Colborne has an older population, lower labour force participation, lower median household income, and a higher proportion of residents with a high school diploma or less. These factors, combined with increasing demand for care, create heightened vulnerability for some residents and reinforce the importance of accessible, community-based health services close to home.

The community profile also points to several access-related challenges relevant to this issue. Approximately 2,700 residents do not have a family doctor, 33% of seniors live alone, and 20% of households live below the poverty line. Transportation barriers and the need to travel outside the community for care can further limit access, particularly for seniors, low-income households, and residents with mobility constraints.

At the same time, Port Colborne's projected growth and aging population underscore the need for a sustainable model that improves timely access to integrated services and better reflects the needs of the community over the long term, as outlined in a recent Council report [CAO-2026-40 Healthcare Analysis Report](#).

Closure of the Complex and Urgent Care Centre

The planned closure of the Port Colborne Urgent Care Centre (UCC) in 2028 has become a significant catalyst for action. Over time, residents have come to rely on the UCC not only for urgent care needs, but also for access to services that would ideally be available through a primary care (i.e. family doctor) and community care system. The closure has amplified concerns regarding travel, equity of access, continuity of care, and the future availability of local urgent care, diagnostics, after-hours services. In response, the city initiated a broad community engagement and planning process to better understand community needs, review service utilization data and identify viable long-term solutions.

Community Health and Wellness Action Plan

The Community Health and Wellness Action Plan presented in report [CAO 2026-65](#) and CAO 2026-116 is intended to improve access to timely, barrier-free healthcare services for Port Colborne residents. Its overall direction is grounded in connected care that is close to home and responsive to residents at every stage of life. The Action Plan identifies eight areas of focus, and supports the case for investment into modern clinical space in order to retain existing lab and diagnostic services, house visiting specialists and ensure quality healthcare access is sustainable for generations to come.

Municipal Leadership

Municipalities have historically played an important role in supporting local healthcare through land contributions, facility development, community partnerships, physician recruitment, and advocacy. As healthcare delivery continues to evolve, municipalities are increasingly exploring innovative approaches to supporting public healthcare

infrastructure that complements, but does not replace, the provincially funded healthcare system.

Given the situation in Port Colborne, one option that warrants further exploration is the potential establishment of a municipally supported Community Health Hub through an appropriate governance model, such as a publicly owned municipal service corporation or other partnership structure. This approach could provide the flexibility to develop, own, and manage healthcare infrastructure while also creating opportunities to attract healthcare providers, leverage external investment, and support long-term financial sustainability. As an example of this model, refer to Appendix B Cowan Community Health Hub.

Discussion

Throughout the development of the Community Health and Wellness Action Plan, the City undertook extensive research, analysis and engagement to better understand Port Colborne's healthcare needs and identify sustainable solutions. Although each phase of work was completed independently, the findings consistently pointed to the need for a modern, integrated facility that brings primary care, urgent care and other essential health services together under one roof, creating a stronger foundation for healthcare delivery in Port Colborne.

This opportunity was identified repeatedly through multiple streams of work, including:

- Community Engagement: Residents who face barriers to healthcare expressed the need for improved access to primary care, urgent care, diagnostic services, rehabilitation and after-hours care in a centralized, accessible location.
- Independent Healthcare Analysis (KPMG): The Healthcare Analysis Report by KPMG and presented in report [CAO 2026-40](#) identified the opportunity to strengthen the local healthcare system by expanding integrated community-based models of care, such as a Health and Wellness Hub, that would improve access and reduce service fragmentation.
- Legal Review: The City's independent legal review recognized there are several legal and regulatory frameworks to permit municipally supported health hubs and non-profit operating agreements, noting that municipalities have an important role to play in healthcare advocacy and infrastructure planning to pursue innovative, locally driven solutions that complement the provincially funded healthcare system.
- Healthcare Advisory Committee: Through meetings with healthcare leaders, service providers, and subject matter experts, the Committee learned about the benefits of

an integrated health hub model as a long-term strategy for improving access and supporting the implementation of the Action Plan.

- Municipal Site Visits and Peer Learning: Site visits to municipally supported health hubs in other Ontario communities demonstrated how integrated healthcare facilities can improve service coordination, attract healthcare professionals, support interdisciplinary models of care, and create long-term community assets.
- Healthcare Provider and Physician Recruitment Discussions: Local healthcare providers, physician recruiters, and prospective practitioners identified the availability of modern medical space as an important factor in expanding access to advanced primary care and attracting and retaining healthcare professionals.

Collectively, these findings demonstrate that the concept of a Community Health Hub did not emerge from a single recommendation or stakeholder group. As the City's understanding of local healthcare needs has matured, so too has the recognition that a Community Health Hub has the potential to serve as long-term healthcare infrastructure capable of supporting many of the priorities first identified by the community and now living within the Community Health and Wellness Action Plans' eight Areas of Focus.

Community Health Hubs: One building. One patient experience.

Community Health Hubs have become an increasingly important component of Ontario's healthcare system as the Province continues to shift toward integrated, community-based models of care. Rather than delivering healthcare through separate facilities and organizations, Community Health Hubs bring multiple healthcare providers, services, and community partners together within a single, coordinated environment that is designed around the needs of patients.

Unlike traditional medical office buildings, Community Health Hubs are intentionally planned to promote collaboration among healthcare professionals, improve care coordination, reduce barriers to access, and create a seamless experience for patients. By co-locating complementary healthcare services under one roof, patients can access multiple services in one visit while healthcare providers are better positioned to communicate, coordinate care, and respond to changing community needs.

Depending on the needs of the community and the organizations involved, a Community Health Hub may include a combination of:

- Primary care physicians and nurse practitioners
- After-hours and urgent care services
- Diagnostic imaging and laboratory services
- Pharmacy services
- Mental health and addictions supports
- Physiotherapy, occupational therapy, and other rehabilitation services
- Visiting medical specialists and outpatient clinics

- Community support agencies and social services
- Health promotion, prevention, and wellness programming
- Municipal or community-based services that contribute to healthier, more connected communities

The exact mix of services varies and is typically developed through collaboration between municipalities, healthcare organizations, community partners, as well as the Province to address identified local healthcare needs.

For Port Colborne, a Community Health Hub presents an opportunity to create a modern, accessible, and integrated healthcare facility that supports residents across every stage of life. By bringing healthcare services together in one barrier-free location, a Hub has the potential to improve patient navigation, reduce travel between multiple appointments, enhance collaboration among service providers, and strengthen access to care for seniors, families, individuals living with chronic disease, and residents experiencing transportation or mobility challenges.

Importantly, a Community Health Hub is not intended to replace hospitals or duplicate services already available within the regional hospital system. Rather, it is designed to complement existing hospital services by expanding access to community-based healthcare, improving care coordination, supporting earlier intervention, and reducing unnecessary visits to emergency departments. This approach aligns with the Province's continued focus on attachment to a primary care provider and delivering more care closer to home to improve health outcomes, patient experience, and system sustainability.

As healthcare continues to evolve, Community Health Hubs are increasingly being recognized as an effective model for improving health equity, expanding interdisciplinary care, attracting healthcare professionals, and creating resilient healthcare infrastructure that can adapt to the changing needs of growing communities.

From Vision to Opportunity

In recent months, as the Health and Wellness Action Plan has been presented, interest in a potential Port Colborne Community Health Hub has continued to grow. The City has received high-level interest from two private sector organizations interested in partnering on the development of a new healthcare facility:

- Boggio's Family of Pharmacies has indicated their interest in a joint venture that would involve a multi-campus healthcare model, with west side and east side health hubs, and the east side health hub in a newly constructed building. See Appendix A Map of Hwy 3 and Hwy 140.
- Elite Developments has proposed a partnership where they would construct a new Class A medical facility in partnership with the City as part of their larger subdivision proposal located at the corner of the Hwy 140 and Main Street East.

A preferred timeline for a Community Health Hub, should one proceed, would correspond with the closure of the UCC at the end of 2028.

Given the level of interest, it is possible that other parties may also bring forward similar joint venture opportunities.

Initial conversations with service providers have identified interest from primary care, diagnostic imaging, laboratory, pharmacy, physical rehabilitation, cardiology, visiting medical specialists including vascular surgery, and community healthcare organizations.

While these discussions are preliminary, they demonstrate that the concept of a Community Health Hub is no longer theoretical. Growing interest from both the healthcare sector and private development partners presents an opportunity for the City to evaluate whether this model is achievable, financially sustainable, and can deliver on the long-term healthcare needs of the community.

Economic Development

Beyond healthcare delivery, a Community Health Hub presents broader opportunities for community and economic development. A self-sustaining and purpose-built healthcare facility located on the east side has the potential to stimulate investment, attract complementary medical and professional services, and support development opportunities within the surrounding area, in a part of the City that is projected to grow. By creating new commercial assessment, future development associated with a health hub could contribute to the municipal tax base to help offset infrastructure and healthcare investment over time.

By strengthening access to healthcare close to home, the Hub could also enhance Port Colborne's ability to attract and retain families, seniors, employers, and healthcare professionals, reinforcing the City's position as a healthy, resilient, and desirable place to live, work, and invest.

Implementing the Community Health and Wellness Action Plan

The Community Health Hub concept directly supports the implementation of the Community Health and Wellness Action Plan by creating a centralized location for integrated healthcare and community services. The Hub has the potential to advance each of the Action Plan's eight Areas of Focus while reinforcing its guiding principles of collaboration, accessibility, innovation, health equity, evidence-informed decision making, and long-term sustainability.

Community Health and Wellness Action Plan Area of Focus	Potential Contribution of a Community Health Hub
---	--

1. Better Access Through Advanced Primary Care	Provides modern clinical space that supports the recruitment and retention of family physicians, nurse practitioners, interdisciplinary primary care teams, and expanded after-hours and urgent care coverage.
2. Medical Imaging, Clinical and Laboratory Services	Creates opportunities to co-locate diagnostic imaging, laboratory services, and other outpatient clinical services, reducing the need for residents to travel outside the community.
3. Community-Based Care	Supports integrated rehabilitation, home and community care, chronic disease management, and other allied health services within one coordinated location close to primary care providers.
4. Mental Health and Well-Being	Provides potential space for mental health and addictions services, counselling, wellness programming, and improved collaboration between healthcare providers and community agencies.
5. Transportation and Access to Care	Improves patient experience by bringing multiple healthcare services together in one accessible location, reducing travel between appointments and simplifying navigation of the healthcare system.
6. Healthy, Resilient Communities	Creates opportunities for health promotion, prevention initiatives, education programs, community wellness activities, and stronger connections between healthcare and community services.
7. Equity, Inclusion and Culturally Safe Care	Supports barrier-free design, universal accessibility, integrated community supports, and flexible space that can better respond to the needs of diverse and underserved populations.
8. Community Voice, Advocacy and Accountability	Provides a physical hub for collaboration among healthcare partners, supports ongoing community engagement, encourages shared planning and accountability, and strengthens the City's role as a healthcare advocate.

While the Community Health Hub represents only one potential implementation initiative within the broader Community Health and Wellness Action Plan, it demonstrates how strategic infrastructure investment can support multiple priorities simultaneously. By integrating healthcare services, community partnerships, and patient-centred design into a single location, the Hub has the potential to improve access to care and advance the long-term vision established through the Action Plan.

Community Health Hub Business Case

Through this report, staff are seeking Council approval to prepare a comprehensive business case that will determine whether the concept is financially sustainable and aligned with the City's long-term healthcare objectives.

The business case would evaluate governance and ownership options, including the use of a publicly owned municipal service corporation, identify existing funding opportunities and partnership models, assess capital and operating costs, examine site considerations, and evaluate implementation timelines and risk.

The completed business case will provide Council with information to determine whether a Community Health Hub represents a viable long-term investment for the City and will be presented for Council's consideration following the 2026 municipal election.

Internal Consultations:

This report has been prepared through collaboration across multiple City departments. Internal consultation included discussions related to planning, communications, economic development, and long-term financial considerations. Should Council direct staff to proceed with the development of a business case, additional cross-departmental consultation will be undertaken to evaluate municipal implications, governance models, funding strategies, and implementation considerations.

Financial Implications:

Funding to support the preparation of the Community Health Hub business case with subject matter experts is within the approved 2026 Budget.

This report seeks approval to develop the business case only and does not commit the City to any future capital investment. Should Council wish to proceed with the development of a Community Health Hub following completion of the business case, all financial implications, funding options, and capital requirements would be presented in a future report for Council consideration.

The report seeks Councils approval to seek partnerships, and funding opportunities were possible to support a Community Health Hub.

Public Engagement:

Since January 2025, the City has completed four phases of public engagement on the future of healthcare. The need for a Community Health Hub has risen quickly through the course of the City's healthcare planning and engagement initiatives. The need for more integrated, accessible, and sustainable healthcare services has consistently

emerged as a both a community and health provider/partner priority, serving as the foundation behind the recommendations within this report.

Strategic Plan Alignment:

Healthcare has been the number one community issue for many years. Advancing the business case for the Health Hub is a key strategic priority that is also reflected in the City's strategic plan:

- Welcoming, Livable, Healthy Community
 - Economic Prosperity
 - Sustainable and Resilient Infrastructure
-

Conclusion:

For more than eighteen months, the City has focused on understanding the future of healthcare in Port Colborne. That work has identified not only the challenges facing the community, but also opportunities to reshape how healthcare is planned and delivered locally. While significant work remains before any decisions can be made, a Community Health Hub represents one of the most promising opportunities to create a sustainable, integrated, and locally responsive healthcare ecosystem. Staff recommend that Council authorize the next phase of work so a comprehensive business case can be developed and presented for Council's consideration following the 2026 Municipal Election.

Cowan Community Health Hub

About the Cowan Community Health Hub

- Located at 25 Curtis Ave N, Paris, ON
- Opened in 2019
- The Cowan Community Health Hub emerged from the need to centralize a wide range of health, social, and commercial services within the local community of Paris, Ontario. Recognizing the potential to address immediate healthcare needs while contributing to the development of a vibrant commercial district, the project aimed to create a multifunctional facility for healthcare professionals and service providers.
- The two-storey, 42,000 square foot Cowan Community Health Hub prioritizes accessibility, functionality, and aesthetics. The building features a double-height central atrium that floods the space with natural light, creating an inviting and uplifting environment for patients, visitors, and staff. Communal spaces like the Community Room and Meeting Rooms were designed to enhance the sense of community and facilitate collaboration among healthcare professionals and service providers. The building's structural steel framing and concrete floors allow for flexible interior space planning, while its exterior is clad in a mix of locally manufactured veneer masonry, composite wood panels, and glazing.
- The use of rooftop photovoltaics generates renewable energy, while green roof areas enhance insulation and support biodiversity. The building features a highly insulated building envelope, low-impact development stormwater management, and energy-efficient fixtures and equipment.
